Method

The sample was N = 46 students from two middle school classrooms. Students were randomly assigned to the tutoring condition or a control group that received the usual reading lessons. The study took place in two public middle schools in a rural district.

Results

Posttest scores are shown in Table 1.

Table 1
Posttest reading scores by group

Measure	Treatment (n = 24)	Control (n = 22)
	M (SD)	M (SD)
Reading fluency	61.3 (14.2)	55.0 (13.1)
Comprehension	48.2 (9.7)	44.9 (10.4)

Note. Values are M (SD).
